

RESIDENTIAL SECTIONAL 1-LAYER AND 2-LAYER DOORS

INSTALLATION INSTRUCTIONS

CONSUMER SERVICES • 1-800-621-3667

INSTRUCTIONS COMPATIBLE WITH THE FOLLOWING MODELS
Traditional Steel Panel Doors M5ST, M5LT // Designer Steel Panel Door MR5S

STEP 1 - BEFORE YOU BEGIN

- Verify you have all parts and materials required for installation.
 - Door Components (See Page 5).

If missing parts or damaged sections, call Consumer Services Hotline 1-800-621-3667.
- Read instructions completely and/or watch installation video.
- **HEADROOM:** Verify appropriate amount of headroom to install door (STEP 3).
- **LOW HEADROOM:** Special instructions and additional hardware may be required (STEP 3, Table 3-B).
- **INSTALLATION TIME:** Allow enough time to complete installation. Garage will be open and unsecured during installation and will not be able to be used until tracks are installed.
 - Removing existing door will take approximately 1–3 hours.
 - Typical installation time is 9–12 hours.
- **TRACK AND HARDWARE:** Express warranties apply only to doors installed using original, factory-supplied sections, parts and hardware and in strict adherence with these instructions.

⚠ WARNING

Never reuse old track or hardware when installing a new door as it may cause installation problems or door to fall which could result in serious personal injury or property damage.

- **AUTOMATIC DOOR OPENER:** Installation of a reinforced mounting point is required to avoid damage (STEP 10). Sold separately.
- **DRILLING:** Take care not to drill through outside steel skin unless otherwise instructed.
- **HIGH WIND AREAS:** Doors installed in high windload regions (Florida and other high wind-prone areas) may require additional reinforcement. Refer to Supplemental Instructions for details if applicable.
- **PAINTING DOOR:** If planning to paint door, follow directions in Care & Maintenance section. Ideal Door® recommends painting door and allowing it to dry completely before beginning install.

TABLE OF CONTENTS

STEP 2	Read Safety Information	2
STEP 3	Check Headroom, Backroom, Sideroom	3
STEP 4	Review Complete Door Assembly and Verify Hardware	4–6
STEP 5	Remove the Existing Door	7
STEP 6	Prepare the Opening	8
STEP 7	Prepare the First (Bottom) Section	9–10
STEP 8	Install Lift Handles	11–12
STEP 9	Install Door Sections	13–15
STEP 10	Reinforce the Top Section for Garage Door Opener	16
STEP 11	Assemble and Install the Track	17–19
STEP 12	Install Lock (If Included)	20
STEP 13	Install Pull Rope (Manually Opened Doors Only)	20
STEP 14	Install Springs	20
STEP 15	Attach Automatic Garage Door Opener	21
	GENERAL MAINTENANCE & CARE	22–24
	WARRANTY	28

STEP 2 – READ THIS SAFETY INFORMATION - IMPORTANT!

WARNING

TO PROTECT YOURSELF FROM INJURY, YOU MUST CAREFULLY READ THE FOLLOWING SAFETY INFORMATION AND WARNINGS BEFORE YOU INSTALL OR USE YOUR NEW GARAGE DOOR!

BEFORE INSTALLING YOUR DOOR

- You can install your new garage door yourself if:
 - a) you have help (it may weigh up to 150 lbs.)
 - b) you have the right tools and reasonable mechanical aptitude or experience
 - c) you follow these instructions very carefully
- Garage doors use springs to balance them. There are two types of springs – extension or torsion. Each of these is available in either a standard or EZ-SET® assembly option. Please look at the drawings on Page 4 to see which springs your old door has. If your door has a different type of spring, consult the original manufacturer's instructions for removal.
- If your old door uses torsion springs, do not attempt to remove the door or the springs yourself. Have a qualified door repair service remove them. Attempting to remove a torsion spring assembly without proper training or tools may result in an uncontrolled release of spring force which can cause serious or fatal injury (Page 4).
- In removing a garage door that has extension springs, follow the instructions carefully (Page 7), including the use of C-clamps or locking pliers on both sides of the door in order to keep the door from moving once the springs are removed.
- Springs, cables and bottom fixtures are under strong spring tension. Do not attempt to loosen any fasteners on these components. You could suddenly release spring forces and risk severe injury.
- Doors equipped with automatic garage door openers can cause serious injury or death if not properly adjusted and operated. To ensure safety of these doors:
 - a) test the sensitivity of the garage door opener's safety reverse mechanism monthly
 - b) if your door has a pull-down rope, you must remove it
 - c) make sure the door remains unlocked
 - d) ensure door is properly reinforced
 - e) do not allow children to play with the controls
- DO NOT attempt to install the door during windy weather conditions. The door sections may be blown down causing serious injury or property damage.
- Manufacturer disclaims all liability for any installation that is not in compliance with these installation instructions or applicable state or county building codes.

WHILE INSTALLING YOUR DOOR

- Use only the track specified and supplied with the door.
- Bolts must be installed at the rear end of horizontal tracks. These act to stop the rollers and keep the door from rolling off the back of the track.
- Track installations must use sway braces on the rear track hangers to prevent sideways movement. If the tracks are not firmly stabilized they might spread, allowing the door to fall and cause severe injury and damage.
- Do not attach any brackets directly to drywall or sheet rock. All track brackets, flag brackets and spring brackets should only be attached directly to 2" × 6" wood jambs. Otherwise, brackets could pull out of the drywall with dangerous force.

AFTER INSTALLING YOUR DOOR

- The brackets at the bottom corners of your garage door are under great tension. Do not attempt to loosen any bracket fasteners except when and as directed in detail in the following instructions. Otherwise, the bracket could spring out with dangerous force.
- Do not permit children to play beneath or with any garage door or electronic operating controls.
- Keep hands and fingers clear of section joints, track and other door parts when the door is opening and closing to avoid injury. In particular, do not place fingers in section joints in order to close the door, as finger pinch, crush or amputation will result. The lift handles are located for safe operation as well as easy use.
- If the garage door and/or any of the supporting track are damaged, operating the door could be hazardous. Contact Consumer Service Hotline.
- If repairs are ever required to your door, safety and trouble-free operation can be best assured by using original replacement parts.
- Once you have completed the installation of your new garage door, please be sure that your garage complies with all applicable ventilation requirements before you enclose any vehicles in the garage. Good ventilation avoids fire and health hazards caused by fumes accumulating within a well-sealed garage.
- Only approved residential garage door openers are permitted to be used in residential applications. A residential application is a building for four families or less, or a garage that is serving the primary residence.
- Install operator control panel away from garage door track and the door itself. Keep body parts away from track at all times when operating an opener or opening/closing a garage door.

In the interest of safety this symbol means **WARNING** or **CAUTION**. Personal injury and/or property damage may occur unless instructions are followed carefully.

STEP 3 - CHECK HEADROOM, BACKROOM, SIDEROOM

Headroom Requirement:

- Headroom is space needed above top of door for door, overhead tracks and springs. Measure to check that there are no obstructions within that space (Fig. 3-A).
- Refer to Table 3-A for standard headroom requirements.
- Track radius can be determined by measuring dimension "R" (Fig. 3-B).
 - If "R" equals 11" to 12", it is a 12" radius track.
 - If "R" equals 14" to 15", it is a 15" radius track.
- Determine which type of spring you have (STEP 4).

NOTE: If there is restricted headroom, several low headroom remedies are available (Table 3-B). Installation of these options differ from installation of a standard headroom door. Supplemental instructions are included with hardware of each low headroom option.

Rough Opening:

- Rough opening (minus stop mold) = same size as door (Fig. 3-A)

Backroom Requirement:

- Measured from back of door into garage, and should be at least 18" more than height of garage door (Fig. 3-A).

Sideroom Requirement:

- Minimum 3-3/4" is needed on each side of door on interior wall surface to allow for attachment of vertical track assembly.
- Minimum 4-1/2" is needed on each side of door above opening for torsion spring attachment.

NOTE: If you are installing an automatic opener, about 3" of additional headroom at the center plus additional backroom is needed. Check door opener instructions.

Table 3-A: Standard Headroom Requirement Chart

Spring Type	Track Radius	Headroom Required
Extension Spring	12"	10"
Extension Spring	15"	12"
EZ-SET® Torsion Spring or Torsion Spring	12"	12"
EZ-SET® Torsion Spring or Torsion Spring	15"	14"

Table 3-B: Low Headroom Options*

Spring Type	Low Headroom Option	Reduces Required Headroom to:	How can I get this option?
Extension	Low Headroom Track	4-1/2"	Order Low Headroom Track
Extension	Low Headroom Conversion Kit (Modifies Standard Track)	4-1/2"	Available at most retail stores
Extension	Quick Turn Bracket	8" on 12" Radius Track	Order Quick Turn Bracket Set
EZ-SET® Torsion	Low Headroom Track (Front Mount Spring)	9-1/2"	Order Low Headroom Track
EZ-SET® Torsion	Low Headroom Conversion Kit (Modifies Standard Track)	9-1/2"	Available at most retail stores
Torsion	Low Headroom Track (Front Mount Spring)	9-1/2"	Available from and should be installed by professional installer only
Torsion	Low Headroom Track (Rear Mount Spring)	4-1/2"	Available from and should be installed by professional installer only

HARDWARE COMPONENTS INCLUDED

NOTE: All doors will receive (1) spring kit and (1) or more springs. Separate spring installation supplemental instructions should be included with door hardware. This supplement contains a list of all spring related hardware along with instructions on proper spring installation.

Image	Description	Qty Single Doors X' x 7'	Qty Double Doors X' x 7'
	Track Bracket (longer)	2	2
	Track Bracket (shorter)	2	2
	#1 Hinge	5	11
	#2 Hinge	2	2
	#3 Hinge	2	2
	#4 Hinge (5-section doors only)	2	2
	Top Bracket	2	2
	Bottom Bracket (1 LH + (1) RH)	2	2
	Flag Bracket (1 LH + (1) RH)	2	2
	Horizontal Angle	2	2
	Curved Horizontal Track	2	2
	Vertical Track	2	2
	Inside Step Plate	2	2

Image	Description	Qty Single Doors X' x 7'	Qty Double Doors X' x 7'
	Cable Assembly	2	2
	Struts*	0	1 or 3
	Lift Handle	2	2
	Pull Rope	1	1
	#14 x 5/8" Hex Head Sheet Metal Screw	56	90
	1/4" x 3/4" Hex Head Self-Tapping Screw	0	10
	1/4" x 5/8" Track Bolt	16	22
	3/8"-18 x 3/4" Lg. Carriage Bolt	2	2
	3/8" Washer	2	2
	1/4" Flange Nut	16	22
	3/8" Hex Nut	2	2
	Rollers	10 (4-section Doors) 12 (5-section Doors)	
	5/16" x 1-5/8" Lag Bolt	10 (4-section Doors) 12 (5-section Doors)	

ADDITIONAL HARDWARE COMPONENTS INCLUDED

ONLY WITH NON-INSULATED COMPOSITE OVERLAY FAUX WOOD DOORS & NON-INSULATED STEEL CARRIAGE HOUSE DOORS

Image	Description	Door Size	Qty.
	Vertical Spade Handle	Single Car Doors 8'-9'W	2
		Double Car Doors 16'W	4
	Handle Spacers	Single Car Doors 8'-9'W	6
		Double Car Doors 16'W	10
	Backup Plate	Single Car Doors 8'-9'W	1
		Double Car Doors 16'W	2

Image	Description	Door Size	Qty.
	Roll Grip Handle	Single Car Doors 8'-9'W	2
		Double Car Doors 16'W	4
	Horizontal Spade Handle	Single Car Doors 8'-9'W	1
		Double Car Doors 16'W	2
	Black Head Carriage Bolt	Single Car Doors 8'-9'W	6
		Double Car Doors 16'W	10

See next page for Additional Materials Needed (Not Included).

ADDITIONAL MATERIALS NEEDED (NOT INCLUDED)

* More struts may be required in high windload areas. (While not representative of any one model, the quantities below can be used as a guide. In some instances, extra screws/bolts are provided in the event of strip-out or loss of parts.)

MATERIALS NEEDED (NOT INCLUDED)

General

- (1) Can of Ideal Door® Pro-Lube
- (24) 10d 3" common nails
- Stop molding
- Wood shims
- Wood block
- Rope

Rear Track Hanger Specific

- (1) Rear Track Hanger Kit or material to make track hanger
- 1-1/4" × 1-1/4" minimum 13 ga. (3/32") minimum thickness punched angle
- (10) 3/8" × 1" bolts and nuts
- (6) 5/16" × 1-1/2" lag screws

TOOLS NEEDED (NOT INCLUDED)

- Work gloves
- Safety goggles
- C-clamps or locking pliers
- Hammer
- Flathead screwdriver
- Measuring tape
- Level
- Socket wrench set
- 7/16" and 9/16" box wrenches
- Drill, 1/4", 3/16" and 3/8" drill bits, 7/16" and 9/16" drive bits
- Stepladder
- Sawhorses (with non-abrasive carpet or other soft material on top surface) or other supports for placing section on while assembling
- Hacksaw
- Wood saw
- Angle square
- Additional tools may be required for spring installation

STEP 5 - REMOVE THE EXISTING DOOR

Step 5-1: Remove Existing Door Springs

NOTE: Garage doors use springs to balance door weight. Springs are one of two types – extension or torsion. Each of these is available in either a standard or EZ-SET® assembly option.

- Use illustrations in STEP 4 to determine which springs existing door has. If existing door's spring type is not found, please consult spring manufacturer.

⚠ WARNING

Serious injury could result from an uncontrolled release of spring forces if spring tension has not been released before other work begins.

⚠ WARNING

To avoid pinch and other crushing injuries, keep hands and fingers clear of section joints, track and other door parts while door is opening and closing.

NOTE: Some large doors can weigh as much as 500 lbs. and single car doors as much as 200 lbs. when spring tension is removed.

Standard Torsion Springs:

⚠ WARNING

If present door uses standard torsion springs, DO NOT attempt to remove door or springs yourself. They should be removed by a qualified door service professional. Attempting to remove a torsion spring assembly without proper training and tools may result in an uncontrolled release of spring forces which can cause serious injury.

Standard Extension Springs:

⚠ WARNING

Extension adjustments or removal should only be made with door in up position. To avoid damage or serious injury from door falling, use two or more helpers to assist in lowering door.

- Raise door to full open position.
- Place C-clamps or locking pliers tightly on both sides of track under door so door is held securely in place (Fig. 5-A).
- With door fully open, most spring tension has been removed.
- Keeping C-clamps in place to keep door from falling, detach cable at both ends.
- Disassemble and remove springs and cable completely from door.

NOTE: Wood blocks should be placed underneath door when closing to prevent fingers from being trapped.

- Remove C-clamps from track and carefully close door.
- Weight of door will not be apparent when you first begin to close door. Door will feel progressively heavier as it is lowered until its full weight is realized about one foot from floor.

EZ-SET® Extension Springs or EZ-SET® Torsion Springs:

⚠ WARNING

To avoid damage or serious injury, use two or more helpers to assist in lowering door. EZ-SET® torsion springs adjustments or removal should only be made with door in down position.

- With door in down position, position drill with 7/16" socket bit over winding unit.
- Using reverse (counter-clockwise) direction on drill, remove all tension from spring. Repeat for each side.
- After spring tension has been removed, detach lift cables at both ends.
- Disassemble and remove springs and cable completely from door.

Step 5-2: Remove Door Sections and Track

- After removal of door springs, door can now be disassembled.
- Starting with top section, remove hardware and unstack sections one at a time (Fig. 5-B).
- After all sections have been removed from opening, detach all remaining track and hardware from jambs.
- Hangers that attach rear ends of overhead track to ceiling (rear track hangers) in many cases can be reused on new door. Be sure they are made of 13 ga. (3/32") or heavier steel and are not loose or unstable.

⚠ WARNING

To avoid installation and operation problems from using worn, damaged or incompatible track, use only track specified and supplied with door. DO NOT attempt to reuse old track.

STEP 6 - PREPARE THE OPENING

NOTE: Rough opening (framed opening without stop molding) = door size

Step 6-1: Framing

- If old door was removed, inspect jambs for rotted or damaged wood and replace immediately.
- Inside of door opening should be framed with 2" × 6" lumber.
- Vertical jamb should extend past opening (Fig. 6-A) to match headroom required (Table 3-B).
- Jambs should be plumb and header should be level.
- Be sure bolts fastening jambs to wall are flush.

Step 6-2: Stop Molding

- Door stop molding should be temporarily but securely nailed to edges of jambs and flush with inside framing (Fig. 6-B).

NOTE: Stop molding with built-in weatherseal is offered.

STEP 7 - PREPARE FIRST (BOTTOM) SECTION

Step 7-1: Locate Bottom Section

- Find section with aluminum weatherstrip retainer fastened to one edge. Retainer is on bottom edge of bottom section (Fig. 7-A).
- Cover sawhorses with carpet or cloth as not to scratch section.
- Place section on sawhorses face down.

Step 7-2: Attach Bottom Brackets

- By hand, bend to break apart bottom brackets as shown (Fig. 7-B). Remove connecting tabs.
- Slide bottom bracket up to fully engage safety tabs into slots on stile (Fig. 7-C).
- Using (2) #14 × 5/8" sheet metal screws, attach bottom brackets to bottom corners of door section.

⚠ WARNING

Failure to properly engage safety tabs on bottom bracket into slots on edge of door may cause sections to fall or spring to break free when spring tension is applied, which can result in severe injury.

Step 7-3: Attach Standard Extension Springs Lift Cables

NOTE: For Standard Extension Springs — lift cables are the longer and smaller diameter of the two sets of cables. DO NOT use shorter safety containment cables as lift cable, this can cause improper door function. For EZ-Set® Extension Springs — DO NOT attach lift cables now, this will be done when springs are installed.

- Hook looped ends of lift cable over buttons on bottom brackets (Fig. 7-D).

Step 7-4: Attach Hinges

- Hinges are stamped with numbers 1, 2 and 3 on the side of the hinge that attaches to the section. (Number 4 is stamped on 5-section door only.)
- Attach a #1 hinge to each pair of prepunched holes along top edge of section using (2) #14 × 5/8" sheet metal screws per hinge (Fig. 7-E).

NOTE: Determine if a strut is required on the bottom section of your door (Table 7-A). Determine whether door thickness is 1-3/8" or 2" and the width of the end stile (Fig. 7-E). To attach strut, overlap hinges using 1/4" × 3/4" self-tapping screws as shown (Fig. 7-F). When predrilled holes do not line up with hinge, drill (2) 3/16" pilot holes through strut, hinge and door at each location (or use impact wrench with 7/16" socket and self-tapping screws) (Fig. 7-F).

STRUT REQUIREMENTS

TABLE 7-A: TRADITIONAL STEEL PANEL DOORS

The table below shows the strut requirements for Traditional Steel Doors.

Door Thickness	Door Width	End Stile Width	Section		
			Bottom	3rd*	Top
1-3/8"	Up to 14'10"	All	–	–	–
1-3/8"	15'–16'	2-1/2"	–	–	✓
1-3/8"	16'2"–18'	2-1/2"	One strut per section		
2"	Up to 15'	All	–	–	–
2"	15'2"–20'	All	–	–	✓

*Section with general safety label.

NOTE: Doors installed in high windload regions (Florida and other high wind-prone areas) may require additional reinforcement. Refer to Supplemental Windload Instructions.

TABLE 7-B: DESIGNER STEEL PANEL DOORS

The table below shows the strut requirements for Designer Steel Doors.

Door Thickness	Door Width	Struts Required
1-3/8"	Up to 14'10"	None
1-3/8"	15'–16'	(1) 2-1/4" Strut per door (top)
1-3/8"	16'2"–18'	(1) 2-1/4" Strut per section
2"	Up to 15'	None
2"	15'2"–20'	(1) 2-1/4" Strut per door (top)

STEP 8 - INSTALL LIFT HANDLES

STEP 8A: FOR TRADITIONAL STEEL PANEL DOORS

NOTE: For Designer Steel Doors proceed to STEP 8B.

Step 8A-1: Bottom (First) Section

- From front side door section, drill (2) 1/2" holes through section according to Bottom Section Hole Pattern (Fig. 8A-A). Use T-square to ensure vertical alignment.

NOTE: If door has an outside keyed lock, hole pattern should be drilled on bottom section directly below lock. If door does not have an outside keyed lock, hole pattern should be drilled directly below hinge closest to horizontal center of door.

- Install lift handle and inside step plate using (2) #14 × 5/8" sheet metal screws (Fig. 8A-A).

IMPORTANT: Use wrench or socket to drive screws. Do not over-tighten. DO NOT use an electric drill or driver.

Step 8A-2: Second (Lock) Section

To be installed at completion of STEP 9A-4. Not required for door with outside keyed lock.

- From front side door section, drill (2) 1/2" holes through section according to Second Section Hole Pattern (Fig. 8A-B). Use T-square to ensure they are vertically in line.

NOTE: Hole pattern should be drilled directly above hinge closest to horizontal center of door.

- Install lift handle and inside step plate using (2) #14 × 5/8" sheet metal screws (Fig. 8A-A).

Painting Lift Handles

- Plastic lift handles can be painted using good quality spray-on or brushed-on enamel paint.

Fig. 8A-A

⚠ CAUTION

DO NOT use these prestamped hinge holes for lift handle placement. Measure per the drilling pattern below. DO NOT use this template for carriage style or overlay doors.

Fig. 8A-B

STEP 8 - INSTALL LIFT HANDLES

STEP 8B: FOR DESIGNER STEEL PANEL DOORS

NOTE: For Designer Steel Panel Doors, see handle installation template that comes with door.

Step 8B-1:

- Use supplemental templates provided in handle bag to determine handle configuration for your door size.

Step 8B-2:

- Find the center of the distance between embosses on the front of the section.
- Use template included with handle to line up the center lines and the bottom section.
- Drill two 1/2" holes where indicated through the front skin of the section and insulation, but STOP BEFORE drilling through the back skin.

Step 8B-3:

- Flip section over and drill two 5/16" holes, through the back skin.

Step 8B-4:

- Slide the black head 1/4" carriage bolt through horizontal spade handle, handle spacer, front of the section, back of the section and roll grip handle.
- Secure with 1/4" flange nut (Fig. 8B-A).
- Repeat Steps 8-2 through 8-4 for second bottom handle (if applicable).
- Second section (to be installed at completion of STEP 9A-4. Not required on doors with outside keyed lock).

Step 8B-5:

- Use back of the template to find your door configuration.
- Using the template, drill the holes in your second section.

Step 8B-6:

- Find the center of the distance between embosses and the middle of the section height on the front of the section.
- Use template included with handle to line up the center lines and the bottom section.
- Drill the indicated 1/2" holes through the section and insulation.

Step 8B-7: Two Outside Spade Handles

For one handle, skip to STEP 8B-8.

- Line up holes in handle backer plate with holes drilled in previous step.
- Attach handle backer plate to back of door with (2) #14 × 5/8" sheet metal screws through inside roll grip handle and into the inside skin (Fig. 8B-A).
- Slide two 1/4" black head carriage bolts through the vertical spade handle, the handle spacers, door section and through the backer plate.
- Secure on the inside with 1/4" flange nuts. Do this for each handle (Fig. 8B-A) Skip to STEP 8-9.

Step 8B-8: One Outside Spade Handle

- Slide (2) 1/4" black head carriage bolts through vertical handle, handle spacers, door section and through backer plate.
- The top carriage bolt should also go through the top hole of the roll grip handle.
- Attach bottom of roll grip handle with a #14 × 5/8" sheet metal screw into the backer plate (Fig. 8B-A).

Step 8B-9:

- Repeat STEP 8B-6 through 8B-8 for second handle set (if applicable).

STEP 9 - INSTALL DOOR SECTIONS

STEP 9A: FOR TRADITIONAL STEEL PANEL DOORS AND DESIGNER STEEL PANEL DOORS

Step 9A-1: Place and Secure First (Bottom) Section

- Place First Section in opening against stop molding and center it from side to side.
- Place a level on section. If necessary, use wood shim under one end to make section level (Fig. 9A-A).
- Once section is level, remove level and drive a 10d 3" nail in jambs at each section end. Bend over edge to hold section in place (Fig. 9A-B).

NOTE: These nails are all that will hold the stacked door section in place until racks are secured to back jambs. Be sure nails hold sections firmly in position.

Step 9A-2: Determine Stacking Order for Remaining Sections Using Table 9A-A or 9A-B Below

NOTE: If a lock assembly was ordered with door, holes for lock may be predrilled. Lock templates are included in lock instructions for doors without predrilled holes.

Table 9A-A:

SECTION ORDER FOR TRADITIONAL STEEL PANEL DOORS					
Door Height	1st (Bottom) Section	2nd (Lock) Section	3rd Section*	4th Section	5th Section
6'0"	18"	18"	18"	18"	–
6'3"	18"	18"	18"	21"	–
6'6"	21"	18"	18"	21"	–
6'9"	21"	21"	18"	21"	–
7'0"	21"	21"	21"	21"	–
7'6"	18"	18"	18"	18"	18"
7'9"	18"	18"	18"	18"	21"
8'0"	21"	18"	18"	18"	21"

* Section with general safety label.

Table 9A-B:

SECTION ORDER FOR DESIGNER STEEL DOORS				
Door Height	1st (Bottom) Section	2nd (Lock) Section	3rd Section*	4th Section
6'0"	24"	24"	24"	–
6'3"	18"	18"	18"	21"
6'6"	21"	18"	18"	21"
6'9"	21"	21"	18"	21"
7'0"	21"	21"	21"	21"
7'3"	21"	21"	21"	24"
7'6"	24"	21"	21"	24"
7'9"	24"	24"	21"	24"
8'0"	24"	24"	24"	24"

* Section with general safety label.

Fig. 9A-A

Fig. 9A-B

STEP 9 - INSTALL DOOR SECTIONS CON'T.

Step 9A-3: Prepare Second (Lock) Section

NOTE: If door is predrilled for a lock, this section will be the one with holes in the center of panel face.

- Place Second Section face down on covered sawhorses.
- Attach a #2 hinge to each end at top edge using (2) #14 × 5/8" sheet metal screws. Attach a #1 hinge to all other prepunched holes using (2) #14 × 5/8" sheet metal screws (Fig. 9A-C).

Step 9A-4: Keyed Lock/Lift Handle Installation

- If you wish to install a keyed lock, begin lock installation now according to supplemental instructions included with lock hardware.
- If door did not come with a keyed lock, install lift handle (Fig. 8A-B).

⚠ CAUTION

Take care not to bend or twist sections with glass as this may cause glass to break, which may result in personal injury.

Step 9A-5: Place and Secure Second (Lock) Section

- Place Second Section in opening on top of First Section.
- Drive a 10d 3" nail in jambs at each section end. Bend over edge to hold section in place.
- Attach hinges from top of First Section to bottom of Second Section using (2) #14 × 5/8" sheet metal screws for each hinge (Fig. 9A-D).

Step 9A-6: Prepare Next (Third) Section

Third Section has the general safety label applied (Fig. 9A-D).

- Place section face down on covered sawhorses.
- Attach a #3 hinge to each end at top edge using (2) #14 × 5/8" sheet metal screws for each hinge. Attach a #1 hinge to all other prepunched holes using (2) #14 × 5/8" sheet metal screws (Fig. 9A-E).

NOTE: If door has more than 1 strut, consult Table 7-A or 7-C. Attach using 1/4" x 3/4" self-tapping screws (Fig. 9A-E). When predrilled holes do not line up with hinge, drill (2) 3/16" pilot holes through strut, hinge and door at each location or use impact wrench with 7/16" socket and self-tapping screws.

Step 9A-7: Place and Secure Next (Third) Section

- Place section in opening on top of previously installed section.
- Drive a 10d 3" nail in jambs at each section end. Bend over edge to hold section in place.
- Attach hinges from top of previous section to bottom of this section using (2) #14 x 5/8" sheet metal screws for each hinge (Fig. 9A-E).

NOTE: If you have two sections left, repeat STEP 9A-6 to 9A-7 using #4 hinges on the end of the top edge and #1 hinges to all other stiles along the top edge.

⚠ WARNING

DO NOT install top section unless you are able to immediately continue through to STEP 9A-10 installing vertical track as this may cause sections to fall.

⚠ WARNING

DO NOT install top section if there are high wind conditions as this may cause sections to fall. Failure to follow these warnings could result in serious injury, death or property damage.

Step 9A-8: Prepare Last (Top) Section

- Place Last Section face down on covered sawhorses.
- Place top roller brackets 3-1/4" from the top of the section, aligning the middle hole in top of bracket with the bottom hinge hole/indentation.
- Attach top bracket using (3) #14 x 5/8" sheet metal screws.

NOTE: There are three options for attaching the strut (Fig. 9A-F).

1. If door was supplied with any struts (Table 7-A) and all holes align, attach using 1/4" x 3/4" self-tapping screws.
2. When predrilled holes do not align with hinge holes, use impact wrench with 7/16" socket, using 1/4" x 3/4" self-tapping screws.
3. Or when predrilled holes do not align with hinge holes, drill (2) 3/16" pilot holes through strut and door at each hinge hole location and using 1/4" x 3/4" self-tapping screws.

Step 9A-9: Place and Secure Last (Top) Section

- Place top section in opening on top of previous section.
- Drive a 10d 3" nail in the jambs at each section end. Bend over edge to hold section in place.
- Attach hinges from top of previous section to bottom of the this section using (2) #14 x 5/8" sheet metal screws for each hinge (Fig. 9A-E).

NOTE: If your door is to be used with an electric operator, you must reinforce the top section before placing it in the opening. Proceed to STEP 10 prior to completing this step.

Step 9A-10: Place Rollers

- Place a roller in the top and bottom bracket and in the tubes in each of the hinges at the ends of each installed section.

NOTE: In hinges with two tubes, place roller in tube furthest from door face (Fig. 9A-G).

Fig. 9A-E

Fig. 9A-F

Fig. 9A-G

STEP 10 - REINFORCE THE TOP SECTION FOR GARAGE DOOR OPENER

STEP 10A: FOR TRADITIONAL STEEL PANEL DOORS AND DESIGNER STEEL PANEL DOORS

To avoid damage to door, you **MUST** reinforce top section of door in order to provide a mounting point for opener to be attached.

⚠ WARNING

DO NOT install the bracket supplied with opener. Failure to reinforce door, as illustrated, will void door warranty.

Step 10A-1: Reinforce Top Section

- You will need (1) or (3) pieces of 1-1/4" x 1-1/4" minimum punched angle at least 13 gauge or 3/32" thick.
- Determine how punched angle is to be affixed to your door size (Fig. 10A-A through 10A-E). Angle iron may need to be trimmed depending on door section height and distance between center stiles.

NOTE: An opener bracket kit specifically designed for opener attachment may be included or purchased (silver galvanized or white powder coated). Instructions are provided with the kit.

NOTE: Operator may be attached up to 2 feet off center. (Doors with torsion springs only.)

Fig. 10A-A Horizontal Reinforcement Attachment (Top of Door Section - Side View)

- For doors requiring horizontal angle reinforcement. Use 1/4" x 1" bolt with 1/4" lock washer and 1/4" nut to secure the angle to the top of the door section

Fig. 10A-B (Drill holes in section or strut where required.)

Required Materials

(1) 18" or 21" length of angle iron	(1) 48" length of angle iron
(6) 1/4" x 1" bolts	(6) 1/4" lock washers
(6) 1/4" nuts	(4) #14 x 5/8" sheet metal screws

Fig. 10A-C (Drill holes in section or strut where required.)

Required Materials

(2) 18" or 21" lengths of angle iron	(2) 1/4" x 1" bolts
(2) 1/4" lock washers	(2) 1/4" nuts
(4) #14 x 5/8" sheet metal screws	(4) 1/4" x 3/4" self-tapping screws

Fig. 10A-D (Drill holes in section or strut where required.)

Required Materials

(2) 18" or 21" length of angle iron	(1) 27" or 50" length of angle iron
(4) 1/4" x 1" bolts	(4) 1/4" lock washers
(4) 1/4" nuts	(8) #14 x 5/8" sheet metal screws

Fig. 10A-E (Drill holes in section or strut where required.)

Required Materials

(1) 18" or 21" length of angle iron	(2) #14 x 5/8" sheet metal screws
(2) 1/4" x 3/4" self-tapping screws	

STEP 11 - ASSEMBLE AND INSTALL THE TRACK

Before assembling brackets to vertical track, be sure to read STEP 11-1 and 11-2. Refer to Fig.11-C for placement of brackets on track.

NOTE: Brackets may already be riveted in place. If additional adjustment is required, rivets can be drilled out and brackets reattached with track bolts and flange nuts (available through toll-free Consumer Services, see front).

⚠ WARNING

Failure to use the track provided with new door may cause installation problems or the door to fall which could result in serious injury or property damage.

⚠ WARNING

DO NOT attach any brackets directly to drywall. All track brackets, flag brackets and spring brackets should be attached directly only to wood bucks.

Step 11-1: Assemble Track Brackets to Vertical Track

- There are two sizes of track brackets for 7' tall doors and 3 sizes for 8' tall doors. Each bracket should be installed with flange facing flat side of track and flat side toward wall (Fig. 11-A).
- Loosely fasten horizontal slot of track brackets to vertical track using (1) 1/4" x 5/8" track bolt and (1) 1/4" flange nut. Head of bolt faces inside track. Brackets should be installed on vertical track as follows (Fig. 11-C):
 - Shortest pair — 10" from bottom of track
 - Next longest pair — centered on track
 - For 8' tall doors — install remaining pair 10" from top of track

Step 11-2A: Assemble Flag Brackets to Vertical Track FOR TRADITIONAL STEEL AND DESIGNER STEEL DOORS

- Determine proper holes in flag bracket for door thickness (Fig. 11-B1).
- Loosely attach flag bracket to top of track with (2) 1/4" x 5/8" track bolts and 1/4" flange nuts. Head of bolts face inside track.

NOTE: If additional adjustment is required, horizontal slots in flag brackets can be used for attachment to vertical track.

Step 11-3: Place Vertical Track into Position

- Place track over rollers on door.
- Move track close to door so rollers are all the way into hinges leaving about 1/2" between edge of door and edge of track.

NOTE: Do not force track too tightly or door will bind.

- Lift track about 1/2" from floor and mark jamb for each lag screw position.

NOTE: Do not raise vertical track beyond bottom rollers on bottom section of door.

- Drill 3/16" pilot holes at each lag screw location. Fasten flag bracket to jamb using (3) 5/16" × 1-5/8" lag screws, one in each of top, middle and bottom holes. Repeat on opposite side.
- Once flag brackets are securely fastened to jamb, tighten track bolts and flange nuts connecting flag brackets to tracks (Fig. 11-D).

NOTE: The tops of vertical tracks must be level with each other. Check this by measuring from top of door sections to top of track on both sides. If they are not equal, cut material off bottom of one track to lower it or raise other track.

NOTE: Pressure-treated lumber purchased after January 2004 is treated with chemicals that have highly corrosive effects on metal fasteners. Fasteners provided with door are intended for use with standard lumber (not pressure-treated) only. If installing door into an opening framed with pressure-treated lumber, it is highly recommended that 5/16" × 1-5/8" lag screws with a minimum galvanization equivalent of G185 be purchased for this application.

Step 11-4: Assemble Flag Brackets to Vertical Track

NOTE: On some doors this angle may be 82" long and will require (3) additional fasteners per side. If angle has been preassembled, skip STEP 11-4 and proceed with STEP 11-5.

- Fasten horizontal angle to horizontal (curved) track using (2) 1/4" × 5/8" track bolts and (2) 1/4" flange nuts. Head of bolt faces inside track (Fig.11-E).

Step 11-5: Support Rear End of Track

- Temporarily support rear end of track with a rope tied to trusses overhead in garage or resting on tall ladder (Fig. 11-F).

Step 11-6: Assemble Horizontal Track to Flag Bracket

- Place curved end of horizontal track over roller in top bracket.
- Attach track to flag bracket using (2) 1/4" × 5/8" track bolts and (2) 1/4" flange nuts. Head of bolt faces inside track.

NOTE: Horizontal and vertical track must join together to form a continuous channel for rollers.

- Attach end of horizontal angle to top of flag bracket with a 3/8" × 3/4" carriage bolt and 3/8" hex nut (Fig. 11-G).
 - For 15" radius track use top set of slots
 - For 12" radius track use middle set of slots
 - For low headroom track use bottom set of slots

Step 11-7: Assemble Rear Track Hangers

NOTE: Rear track hangers are not provided with standard hardware and will need to be made at this time. They are used to attach rear horizontal track to ceiling joist and must be strong enough to hold full weight of door.

⚠ WARNING

Sway braces must be used to prevent tracks from spreading and allowing door to fall, which could cause serious injury. Bolts placed in end of each track (Fig. 11-H) must be at least 1" long to prevent top section from exiting track.

Fig. 11-D

Fig. 11-E

Fig. 11-F

Fig. 11-G

- Use 1-1/4" x 1-1/4" punched angle, at least 13 gauge or 3/32" steel to make two rear track hangers with sway braces (Fig. 11-H).
- Attach to track using at least 1" long bolts (Fig. 11-H).

Step 11-8: Placement of Rear Track Hangers

Placement of rear track hangers is critical for door to operate properly. They should not be mounted any farther than 6" from end of horizontal track and should hold horizontal track level and square to door.

- Squareness should be measured by comparing two diagonal distances (Fig. 11-I):
 - 1) From top left-hand corner of door to rear of right-hand horizontal track.
 - 2) From top right-hand corner of door to rear of left-hand horizontal track.
- Squareness distances should be within 1/2" of each other. Horizontal track can be out of level up to 1" from front jamb to rear track hanger (Fig. 11-I).
- With track square and level with opening, track hangers can be fastened permanently to ceiling trusses using (3) 5/16" x 1-1/2" lag screws. Drill 3/16" pilot holes before installing 5/16" lag screws.

⚠ WARNING

To prevent door from falling and causing serious injury, be sure rear track hangers are properly secured to trusses with adequate length screws.

Step 11-9: Adjust Top Section

- With track installed, top door section can now be properly adjusted.
- Loosen slide on top bracket and push top of door against stop molding or door jamb. Pull roller toward you so it is tight against the groove in track.
- Tighten slide bolts (Fig. 11-J).
- Remove all 10d 3" nails holding all sections in place.

Fig. 11-H

Fig. 11-I

Fig. 11-J

STEP 12 - INSTALL LOCK (IF INCLUDED)

If a lock is included with door, follow appropriate instructions below.

Exterior Keyed Lock:

- If door has an exterior keyed lock, complete installation of lock at this time. Follow instructions provided with lock hardware.

Interior Slide Lock:

- Use track as a guide to achieve proper alignment.
- Position slide bolt against top of one of rectangular engaging slots in vertical track.

NOTE: It may be necessary to knock out slug in vertical track to open slot for lock engagement. Remove slug by striking with a hammer from outside of track.

- Install inside slide bolt on the end stile of second section.
Use (4) #14 × 5/8" hex head sheet metal screws (steel doors)
or (4) 1/4" × 1" lag screws (Fig. 12-A).

NOTE: 3/16" holes may need predrilled before installing screws.

IMPORTANT: If door is going to be equipped with an automatic garage door opener, disable or remove this lock. This will avoid damage to door.

#14 x 5/8" Sheet Metal Screw or 1/4" x 1" Lag Screw

Fig. 12-A

STEP 13 - INSTALL PULL ROPE (MANUALLY OPERATED DOORS ONLY)

NOTE: Rope is only intended for use on manually operated doors. DO NOT install pull rope if using an automatic garage door opener.

Step 13-1: Install Pull Rope for Manually Operated Doors

- Install the pull rope by attaching to roller shaft in bottom bracket of door (Fig. 13-A).

Fig. 13-A

STEP 14 - INSTALL SPRINGS

Step 14-1: Install Springs

- Proceed to springing instructions that came with spring hardware.

STEP 15 - ATTACH AUTOMATIC GARAGE DOOR OPENER

IMPORTANT: To avoid damage to door, you **MUST** reinforce top section of door in order to provide a mounting point for opener to be attached. Refer to STEP 10 – Reinforcing the Top Section. Failure to reinforce door as illustrated will void door warranty.

⚠ WARNING

To avoid risk of strangulation or personal injury, if door has a pull rope, you must remove pull rope when you install an automatic garage door opener.

⚠ CAUTION

If you have installed a door lock, disable or remove at this time. Failure to do so may cause damage to the door and void the warranty.

Step 15-1: Remove Pull Rope and Lock

- If installed, remove pull rope and locks (or unlock).

Step 15-2: Install Opener Head and Rail

IMPORTANT: When installing an automatic garage door operator, follow manufacturer's installation and safety instructions carefully.

- To prevent top of door from bending, opener rail should be mounted no less than 2" and no greater than 5" from face of door in open position (Fig. 15-A).
- Follow operator manufacturer's instructions.

Step 15-3: Attach Opener Arm to Door

- Attach opener arm to vertical reinforcement (Fig. 15-B through 15-D).
- Attachment should be roughly same height as top roller of door.
- When door is in down position, door should be at angle of approximately 60 degrees from vertical operator bracket (Fig. 15-B).

GENERAL MAINTENANCE

FOR ALL TRADITIONAL STEEL PANEL DOORS AND DESIGNER STEEL PANEL DOORS

Your door will need regular inspection, lubrication and cleaning. The following checklists will help keep your door and its parts in good working order and help protect it from the elements

⚠ WARNING

A sectional garage door is a large, heavy object that moves with the help of springs under high tension. Springs, bottom brackets, cables and associated hardware are under high tension and can cause death, serious injuries or damage to the door if not properly handled. For your safety and the safety of others, follow these instructions:

- **DO NOT loosen or remove bottom bracket with the spring tension engaged.**
- **DO NOT operate door with a broken spring.**
- **DO NOT manually operate door if handles are not installed or functioning properly.**
- **DO NOT operate door if it is too difficult to move, opens too quickly or the rollers come out of the track.**
- **DO NOT operate the door if glass or interior window retainer appears to be loose, cracked, or warped. DO NOT remove screws on inside retainer.**

VISUAL INSPECTION CHECKLIST

Monthly inspection of the door and all of its components is recommended. If something seems out of balance or adjustment, or you note any of the following, please contact Consumer Services Hotline at 1-800-621-3667.

Visually inspect the door when in the down position for:

- Loose or bent hinges.
- Broken wheels, bent shafts or worn out bearings on rollers.
- Loose or missing bolts, screws or other fasteners on the door or track.
- Creases or bends in the track.
- Cracking or fatigue of the door panels.
- Damaged or broken springs or spring components. If the spring looks broken it will need replaced.
- Standard extension springs that run alongside the door should include a safety containment cable. To see a visual of the safety containment cable scan the QR code to the right or visit: http://clopaypdfs.com/pdf_files/SUP-0137180_EN.pdf
- Worn or frayed cables.
- Loose, cracked or warped glass panels or inside glass retainers. Inside the door, the plastic retainer and holding the glass and its fasteners should appear secure.
- Tears or gaps in the bottom weatherseal or perimeter seal.
- Any covered, ripped, damaged or missing warning labels.
- Any missing, broken, loose or malfunctioning door handles. There should be two lifting points on the outside and two on the inside of the garage door.

DOOR OPERATION CHECKLIST

We recommend that at least twice per year after you visually inspect the door and all of its components. Scan the QR code to the right or visit: <https://vimeo.com/106430735>

- Check the balance of the door.
 1. With the door in the down position, detach the opener (if applicable) by pulling down on the red manual release handle.
 2. Next lift the door manually up to the halfway point and gently release the door. A balanced door should hang in place and not raise or lower. If the door does not stay in place contact Consumer Services Hotline.
- Check the door operation.
 - Once you have determined your door is in balance, lift the door up and down to ensure smooth operation. The door should be easily controlled when lifting and lowering.
 - Note: Be sure to reattach the opener once you confirm the door is operating properly.
- Safety feature for doors with automatic operators:
 - Make sure any door locks are disabled or removed if an automatic operator is installed.
 - Retest following opener manufacturer's instructions.

LUBRICATE THE DOOR

At least twice per year lubricate all moving parts of the door with Ideal Door® Pro Lube or a synthetic lubricant:

- Lift cables at bottom bracket button.
- Lock hardware where surfaces turn or slide.
- Full length of torsion spring to reduce friction between coils.
- Rollers at the bearing (but not the tire).
- Hinges

CARE & MAINTENANCE

FOR ALL TRADITIONAL STEEL PANEL DOORS

APPLIES TO THE FOLLOWING MODELS

Traditional Steel Panel Doors M5ST, M5LT // Designer Steel Panel Door MR5S

CLEANING & PRESERVING THE DOOR

Doors must be cleaned and waxed at least twice a year or four times a year for harsh environments (such as coastal regions, areas with high road salt, etc.). **Failure to do so may result in loss of warranty coverage. For further questions about the requirements, refer to the warranty page at the end of this manual or contact Consumer Services.**

Cleaning & Waxing

- Helps prevent damage (rusting) caused by foreign matter or salt adhering to the door.
- Assist to restore the look of factory-applied finish by removing dirt and chalking.
- For how-to video scan the QR code to the right or visit: <https://vimeo.com/106434183>

Cleaning the Door

Working from top to bottom of the door sections, use a well soaked cloth, sponge or soft bristle brush with either of the following solutions:

- One cup of Simple Green® or other non-toxic biodegradable cleaner (less than 0.5% phosphate) into two gallons of warm water -OR-
- Household liquid dishwashing detergent such as Dawn®.
- **DO NOT use scouring powders or solvents when cleaning the door. If preparing to paint, see cleaning instructions under "Painting" in this manual.**
- Rinse door with clean water to complete cleaning and allow to dry.

NOTE: Be sure to clean behind stop molding on the sides and top of the door. Refer to "Window Care" for detail on window cleaning on the next page. **DO NOT use a pressure washer on the door.**

Waxing the Door

After cleaning, use liquid car wax (not paste) to preserve the door's finish. This is especially important in coastal and harsh environments. Be sure to wax any surface that may be exposed to elements such as salt, including the interior of the bottom section of the door.

- To apply the wax, follow the manufacturer's instructions.

NOTE: Be careful not to get wax on decorative hardware as this may cause discoloration.

WINDOW CARE

Snap-In Decorative Inserts

- Decorative inserts are designed to snap in and out of the window frame and may be installed on the inside or outside of the window.

NOTE: DO NOT REMOVE SCREWS from the window frame.

Removing Decorative Inserts for Cleaning & Painting Purposes

- The insert has tabs on each end of each leg.
- To remove, pull the center of the insert firmly out of the window.
- Replacing the insert is the reversal of the process described for removal. The four tabs must be pressed under the lip in the window frame.

Window Cleaning

- Clean glass with a mild solution of a dishwashing detergent and a soft cloth.
 - For acrylic impact or decorative windows: These windows CAN ONLY be washed using a clean, soft sponge or cloth with a mild dish soap and lukewarm water. Dry with soft cloth or chamois to prevent spotting.
 - DO NOT use any ammoniated, abrasive or solvent-based cleaners of any kind. DO NOT brush, scrub or scrape these windows.
- After cleaning, rinse thoroughly.

CAUTION

Use care when handling decorative windows to avoid scraping or scratching the surface.

Glass Replacement

WARNING

To avoid injury, use extreme caution in handling glass window pane. When frame is removed, exposed steel edge of door may be sharp. Avoid contact with steel edges. Always wear safety glasses and gloves.

- If the door is equipped with windows, and glass should need replacement, follow the steps below:
 - 1) With someone holding the outside frame, remove screws from the inside frame retainer.
 - 2) Pull inside frame out of door. Carefully remove broken or old glass.
 - 3) Insert new glass.
 - 4) With someone holding outside frame, reinsert screws into inside frame, securing glass.

Designer Steel Window Frame and Retainer Retightening

- Using drill loosen screw by turning it counter-clockwise one to two turns - do not unscrew any farther.
- Retighten screw turning it clockwise the total turns unscrewed plus another turn or two. Do not over tighten the screw.
- Tighten one screw location at a time. Repeat steps for remaining screws.

PAINTING THE DOOR

Read these instructions completely prior to painting your door.

! CAUTION

Failure to follow these instructions may cause damage to your door, which will result in loss of warranty.

Required Paint

- Your garage door can be painted with high quality 100% acrylic latex (flat, satin or semi-gloss) exterior grade paint.
- **DO NOT use any type of oil-based paint or alkyd modified paint. These paints will void the warranty of your door.**
- We strongly recommend all doors are painted with solar reflective paint when available, especially when using darker colors and when the door is in direct sunlight or a high heat/high UV environment. These paints help reflect more sunlight, keeping the surface of the door cooler.
- For more information and a list of pre-approved paints, call the consumer hotline at 1-800-621-3667, scan the QR code to the right or visit info.garagedoors.com/lrv

Preparing the Surface

Before painting, the door, window frames and inserts must be free of dirt, oil, caulk, waxes and mildew. To prepare window grilles and window frames:

- Lightly scuff the entire exposed surface of window grilles and window frames with medium sandpaper (grit 60-100).

NOTE: Sanding could remove rust-inhibiting compounds from the steel portion of the door, therefore, sanding should be done only to damaged areas where bare metal has been exposed. Refer to "Paint Repair" for details on repair on the next page.

Cleaning the Door for Painting Only

- Make a solution of trisodium phosphate, also known as TSP, using 1/3 cup of powder to 1-1/2 to 2 gallons of water. **NEVER BLEND CLEANERS OR AMMONIA WITH BLEACH.**

NOTE: DO NOT use this if you are not planning to paint the door.

- Saturate cleaning pad (3M synthetic steel wool—gray not green) and rub with even pressure to lightly scuff surface while applying the cleaning solution over all surfaces to be painted.
- Rinse with clean water and sponge, changing water often.
- A final wipe and rinse with clean water and sponge should be done to

remove any loose material.

NOTE: You must remove any wax applied to the door before cleaning (doors are not waxed in the manufacturing process). Using moderate pressure, wipe the door surface with a rag saturated with xylene (xylol). Xylene is a flammable substance, be sure to follow instructions when using. DO NOT allow it to sit on door for extended time. Damage to your door's paint system can occur if overexposed to this or other solvents.

Pretesting Paint

All paints are not created equal. The following test must be performed prior to application on the entire door:

- Apply paint on a small area of door (following instructions on paint container).
- Allow paint to dry and evaluate for any blistering or peeling.
- Perform adherence test by applying strip of masking tape over painted area and peel back tape. Check to see that paint adheres to door and not to tape.

NOTE: If paint shows signs of poor adherence (blistering or peeling) there may be a problem with the paint or surface preparation. DO NOT PROCEED! A new paint or further preparation of surface is called for.

Applying Paint

Follow directions on paint container and apply to door. Be sure to allow adequate drying time should you wish to apply a second coat.

NOTE: DO NOT apply paint when door surface temperature is different from manufacturer's suggested temperature range for application.

Paint Repair

Should door's paint finish become damaged, exposing bare metal, it will become necessary to repair this area to prevent rust from forming.

- Damaged area should be lightly sanded with medium to fine sandpaper, making sure to remove all visible red and white rust.
- Wipe this area with dry, clean rag.
- Coat sanded area with high quality, rust inhibiting, zinc enriched primer. This can be found at most paint or hardware stores and should be labeled for covering bare and galvanized steel.
- Wait time specified on the primer's instructions before proceeding with painting door.

IDEAL DOOR® LIMITED WARRANTY

NON-INSULATED STEEL GARAGE DOORS

Subject to the terms of this Limited Warranty ("Warranty") and any warranty policies and procedures in effect at the time a notice of a claim is received, Ideal Door ("Ideal", "we", or "our") will repair or replace (at our sole discretion) any garage door sections/section components, hardware, or springs/spring components (collectively, "Replacement Parts") that we determine to be defective in material or workmanship so long as timely written notice is provided within the applicable limited warranty periods provided below. This Warranty shall apply and benefit only the original purchase of an Ideal Door garage door product and is non-transferable.

The Warranty period begins from the date of delivery. Proof of purchase is required. Once we have verified any defect(s) with your Product through persons authorized by Ideal Door, we will provide – at no cost to you – Replacement Parts to the extent necessary to repair or replace any such defective sections, hardware, or springs/spring components. We reserve the right to inspect and/or verify any claimed defect, as well as the right to replace Product(s) or its components with a similar or like product or component, all within the sole discretion of Ideal Door. All labor costs associated with any warranty claim (including removal, reinstallation, installation, and/or finishing) will be your responsibility.

The applicable Warranty periods are as follows:

MODEL NUMBER	PAINT FINISH	SECTIONS/ DELAMINATION	WINDOWS	HARDWARE/SPRINGS
TRADITIONAL STEEL PANEL GARAGE DOORS: M4SV, M4LV, M4FV	Single Family* – Lifetime Other** – 10 Years	5 Years	10 Years	3 Years
TRADITIONAL STEEL PANEL GARAGE DOORS: M5ST, M5LT, M5EST, M5ESV	Single Family* – 15 Years Other** – 10 Years	5 Years	10 Years	3 Years
DESIGNER STEEL PANEL GARAGE DOOR: MR4L, MR4S, MR4SV, MR4LV	Single Family* – Lifetime Other** – 10 Years	5 Years	10 Years	3 Years
DESIGNER STEEL PANEL GARAGE DOOR: MR5S, MR5SV	Single Family* – 15 Years Other** – 10 Years	5 Years	10 Years	3 Years

Terms and limitations of the limited warranty are further detailed below:

* Applies to residential single family installations.

** "Other" refers to all other residential installations (including installations on facilities owned in common by condominium associations or similar organizations).

ADDITIONAL INFORMATION REGARDING YOUR WARRANTY

Ideal Door warrants the sections of the Models listed above against the paint finish cracking, checking or peeling (i.e. losing adhesion). We warrant our rust prevention system against rust through perforation(s) caused by corrosion originating at the steel layer. Surface rust – and rust through caused by untreated surface rust – is not covered under this warranty. Surface rust (a coating that forms on the surface when exposed to moisture) can result from failure to properly clean and maintain your door (particularly in, but not limited to, high-salt or acidic environments) or damage to the door (such as scratching). For more information about our rust prevention system and how to care for your door visit: info.garagedoors.com/maintenance.

Window components such as frames, grilles, inserts, and clear acrylic are warranted for ten (10) years from manufacturing defects and excessive yellowing. Insulated windows are warranted for ten (10) years for material obstruction of vision resulting from film formation or dust or moisture collection between the interior surface of the insulating glass. No warranty is available for single pane glass. No warranty is available for decorative hardware.

EXCLUSIONS TO COVERAGE

This warranty shall not extend to damages or defects caused by any of the following:

Paint or Stain Not Applied per Manufacturer Specifications after Delivery of Door	Failure to Follow All Installation Instructions	Failure to Follow Maintenance Instructions	Faulty or Defective Installation(s)
Fire	Radiation (UV or Other)	Foreign Substances	Accident or Casualty
Harmful Fumes	Vandalism	Act(s) of God	Physical Damage
Salt Spray or Exposure	Normal Wear and Tear	Chemical Action	Abrasive Materials
Operation Beyond Rated Capacity	Improper Use or Abuse	Improper Installation or Handling	Exposure to Coastal Weather Conditions
Alteration, Modification or Use of Non-OEM/ Clopay-Approved Parts or Products	Other Painted Parts Not Part of a Door Section (such as stop mold)	Normal Fading or Discoloration from Usage, Age or UV Exposure	Thermal bow as described in DASMA Technical Data Sheet 185 www.dasma.com

If you make any repair or alteration without first providing notice to and receiving authorization from us, or use any parts, accessories, or attachments other than authorized by Ideal Door for use in its products, you will be solely responsible for any such repairs or parts and you may void this Warranty. Routine maintenance and related items, as well as minor adjustments or damage caused by your installer either during delivery or installation, are excluded from this Warranty. For purposes of this Warranty, minor scratches will not be considered a defect.

If you would like to submit a Warranty claim, notify Ideal Door Customer Service promptly after discovery of the defect by sending an email to idealdoor@clopay.com or calling 800-621-3667. Please be prepared to send us a proof of purchase and complete description with photographs of any issues. YOU MUST REPORT ANY MANUFACTURING DEFECTS THAT ARE IMMEDIATELY OBVIOUS OR VISIBLE AT THE TIME OF INSTALLATION (SUCH AS INCORRECT OR INCONSISTENT PAINT COLOR, MANUFACTURING DEFECTS (E.G. SURFACE CONTAMINANT(S) OR SMUDGES), VISIBLE PHYSICAL DAMAGE, OR MAJOR SCRATCHES) WITHIN FORTY FIVE (45) DAYS FROM DELIVERY OR YOUR CLAIM MAY BE BARRED. Additional copies of our installation and maintenance instructions may be obtained by calling 800-621-3667.

UNDER NO CIRCUMSTANCES SHALL WE BE LIABLE FOR ANY CONSEQUENTIAL OR SPECIAL DAMAGES WHICH ANY PERSON OR ENTITY MAY INCUR OR CLAIM TO INCUR AS A RESULT OF ANY DEFECT IN THE PRODUCT OR IN ANY CORRECTION OR ALTERATION THEREOF MADE OR FURNISHED BY US OR OTHERS. OUR MAXIMUM LIABILITY UNDER THIS WARRANTY SHALL BE THE PURCHASE PRICE PAID TO US WITH RESPECT TO THE GARAGE DOOR TO WHICH SUCH WARRANTY IS CLAIMED. THE LIMITATION OF LIABILITY PROVISIONS HEREIN SHALL APPLY TO ANY AND ALL CLAIMS OR SUITS BROUGHT AGAINST US, INCLUDING ANY CLAIM BASED UPON NEGLIGENCE, BREACH OF CONTRACT, BREACH OF WARRANTY, STRICT LIABILITY OR ANY OTHER THEORIES UPON WHICH LIABILITY MAY BE ASSERTED AGAINST US.

This Warranty constitutes our entire and exclusive warranty as to the Product and is the sole and exclusive remedy for product defects in material and workmanship. We do not assume (and have not authorized any other person to assume on its behalf) any other warranty or liability in connection with any product covered by this warranty. WE MAKE NO OTHER WARRANTIES, REPRESENTATIONS OR COVENANTS, EXPRESS OR IMPLIED, WITH RESPECT TO THIS PRODUCT, INCLUDING BUT NOT LIMITED TO WARRANTIES, REPRESENTATIONS OR COVENANTS AS TO WORKMANSHIP, DESIGN, CAPACITY, QUALITY, CONDITION, MERCHANTABILITY OR FITNESS FOR ANY PURPOSE OF THE PRODUCT, EXCEPT FOR ANY "IMPLIED WARRANTY" AS THAT TERM IS DEFINED IN THE MAGNUSON-MOSS WARRANTY-FEDERAL TRADE COMMISSION IMPROVEMENT ACT, SUCH IMPLIED WARRANTIES TO BE LIMITED IN DURATION TO A PERIOD OF ONE YEAR FROM THE DATE OF PURCHASE. This warranty gives you specific legal rights, and you may also have other rights that vary from state to state.

This warranty gives you specific legal rights, and you may also have other rights that vary from state to state.

To the extent of any conflict between this Warranty and any other document, this Warranty shall control. If Warranty is provided in multiple languages, the English language version shall govern.
